

Additional Technical Proposal Instructions

RFP No. N02CO57005-94

1. Handling and Storage of Proprietary Information

The nature of the work in this contract requires the handling and storage of proprietary information (e.g. chemical structures, research organizations, testing assays). Offerors that may have a commercial conflict of interest related to the proprietary information handled during the execution of the tasks in the contract (e.g. pharmaceutical and biotech companies) shall provide evidence that the conflict of interest is properly managed. This includes rules and processes to insure that the integrity of any proprietary information is not compromised either internally within the offeror's company or to the external community.

2. Other Considerations

Record and discuss specific factors not included elsewhere which support your proposal. Using specifically titled subparagraphs, items may include:

- a. Any agreements and/or arrangements with subcontractor(s). Provide as much detail as necessary to explain how the statement of work will be accomplished within this working relationship.
- b. Unique arrangements, equipment, etc., which none or very few organizations are likely to have which is advantageous for the effective implementation of this project.
- c. Equipment and unusual operating procedures established to protect personnel from hazards associated with this project.
- d. Other factors you feel as important and support your proposal.
- e. Recommendations for changing reporting requirements if such changes would be more compatible with the offeror's proposed schedule.

3. Sample Task Order

For details regarding the Sample Task Order "Task Order Request for Proposal (TORFP) 2015-NCI-CAR-01," please reference Attachment 25 of the RFP for further instructions.
